PRODUCT DESCRIPTION

Crafted from concrete and Lava Rock, these decorative diffusers are the perfect way to enhance any setting by adding the aromatic benefits of CPTG® essential oils. The porous nature of a lava rock is ideal for absorbing essential oils. With no need for water or electricity, these diffusers are the perfect choice for desktops, nightstands, hotel rooms, and travel use. The Lava stones are a type of pumice shaped into uniform discs that are incredibly porous, meaning there are lots of air pockets for oils. Lava diffusers work by allowing the oil to evaporate slowly. Package includes two Lava Rock Diffusers.

DIRECTIONS FOR USE

Add three to four drops of desired oil to lava rock. Refresh with additional drops of oil as desired.
