

Air Repair™

Air Cleansing Blend 15 mL

dōTERRA®

PRODUCT INFORMATION PAGE

CPTG

Application: A | N

Aromatic Description: Fresh and Sweet

Ingredients: Litsea Oil, Tangerine Oil, Grapefruit Oil, Frankincense Oil, Cardamom Oil

KEY INGREDIENTS AND BENEFITS

- Cleanses the air of infectious airborne microorganisms
- Provides antioxidant protection against exposure to toxic oxidative stressors of the respiratory tract
- Supports healthy lung cell function and repair incense only, not for external use or internal use clothes.

PRODUCT DESCRIPTION

As populations grow and industries expand in large metropolitan areas of the world, so does the risk of exposure to airborne germs and toxic pollutants. Although masques and air filters can help minimize exposure to these toxic pressures, it is increasingly difficult to eliminate all respiratory contact with toxins in the air we must breathe to live. dōTERRA's Air Repair is an aromatic blend of essential oils combined to cleanse the air of infectious airborne micro-organisms before they enter our lungs, and to help protect lungs cells against exposure to toxic airborne pollutants. Air Repair includes Litsea essential oil which contains the phytochemical compounds neral and geranial which have been demonstrated in laboratory tests to have powerful anti-microbial activity against common airborne pathogens. Air Repair also includes Tangerine and Grapefruit essential oils that are natural sources of limonene, a powerful phytochemical which has been studied for its antioxidant and cell protective benefits, and Frankincense which includes therapeutic alpha-Pinene which supports healthy DNA function and repair. Cardamom essential oil is included to help calm and open airways and support healthy respiratory function. Air Repair can be safely diffused at home or in the work place daily as a proactive way to cleanse air of airborne microbes and provide support to lungs exposed to environmental toxins.

DIRECTIONS FOR USE

Diffuse in home or office all day, every day. Use lightly for day-to-day air maintenance and increase aromatic volume during seasonal challenges or when exposure to air pollution is unavoidable. One drop may also be added to air filters and masques.

CAUTIONS

When diffusing, a very light aroma in a room is ideal. If you experience any discomfort with eyes or respiratory track, decrease the amount being diffused. For aromatic use only, not for topical or internal use.
