

Copaiba

Sourcing and Impact

A Copaiba tree
can live up to
400 Years
and grow taller than
100 Feet

Copaiba in Brazil is
wild-harvested from
January to June.

This is when the
Amazon's rainy season
raises the river up to

20 Feet

so boats can carry
native harvesters into
the rainforest's
winding waterways

The Co-Impact Sourcing® Challenge
Fund supported one of our sourcing
partners, helping them

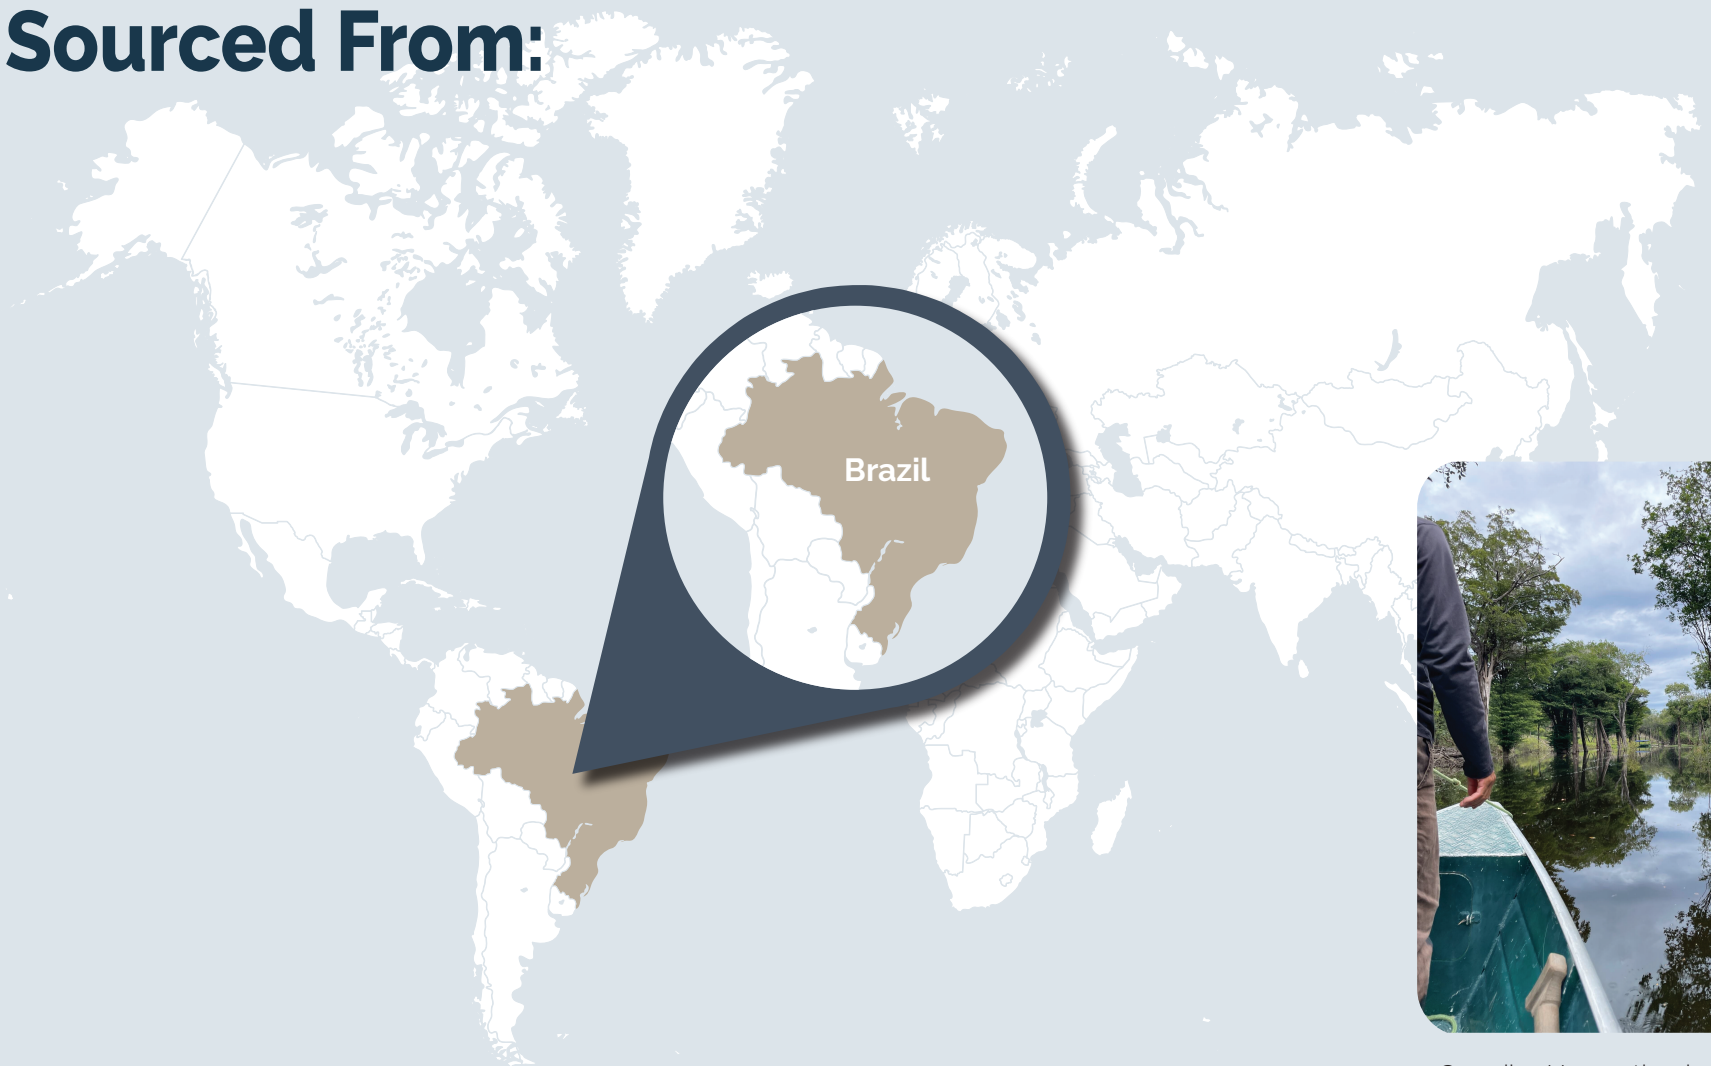

Improve Harvester and Safety Practices

in Apuí and Oriximiná

Our partner provided tailored
PPE like gloves, boots, and hats,
along with training on safe,
sustainable harvesting

Sourced From:

Copaiba Harvesting in Brazil

In 2019, the Healing
Hands Foundation funded
a dental clinic for

350 People

residing in

**7 Remote
Copaiba-Harvesting
Communities**

7 Impact Projects

funded by dōTERRA
Healing Hands in
Brazil since 2019

One of our sourcing partners
seeks to help a local
harvester grow by building a
network of harvesters and
organizing their payments
and raw material deliveries

Amazonas is Brazil's
fourth poorest state,
but collecting
Copaiba and other
forest products
allows many families
in that region to
generate income
